

GREEN UNISON

Doing our bit
to make public
services greener

We're already seeing the impact of the climate emergency here in the UK and around the world – and it's only going to get worse unless we work together to take action.

As the UK's biggest trade union, UNISON has a role to play in helping our public services become greener and protecting our planet, so here's seven things your branch can do to get started:

- create a green rep on your branch committee
- get your workplace to declare a Climate Emergency
- engage with your employer on green issues
- ask your employer to set up a green budget
- find out five things your employer is doing to green the workplace
- look at how can you work with your employer to reach a net zero target
- hold a climate change branch meeting.
